*The % Daily Value (DV) tells you how much a nutrient in a serving of food contributes to a daily diet. 2,000 calories a day is used for general nutrition advice.

Mix all ingredients in a medium saucepan. Cook over medium heat for approximately 30 minutes. Serve on whole grain bun. **Yield: 6 servings**

Adapted from Wild Game: From Field to Table, Sandra Bastin, PhD, RD, Extension Food and Nutrition Specialist, Revised July 2007

- Venison Sloppy Joes**
- 1 pound ground venison
 - 1 onion, chopped
 - 1 green bell pepper, chopped
 - 2 stalks celery, chopped
 - 2 tablespoons brown sugar
 - ¼ cup water
 - ¼ cup vinegar
 - 2 tablespoons lemon juice
 - 8 ounces low-sodium condensed tomato soup
 - 1 tablespoon Worcestershire sauce
 - 1 tablespoon prepared mustard

Liquid Calcium Research in Allen County

Allen County participated in a liquid Calcium research project along with multiple counties across the state. The goal of this project was to look at three different liming agents: Liquid Calcium, Pelletized Lime and Ag Lime, to compare the soil pH increase over a 12 month period. Below, in table 1 and 2, you will find the combined results for this project. At a later date there will be a publication available for this study.

Research results provided by Dr. Edwin Ritchey, University of Kentucky

Table 1. Soil pH 0, 3 and 12 Months After Field Application. Data is composite of 16 field sites.

Treatment	-----Soil pH-----			-----Change in Soil pH-----	
	Initial soil pH (<0.854)	Soil pH (3 m) (<0.001)	Soil pH (12 m) (<0.001)	Change in 3 m ² (<0.001)	Change in 12 m ³ (<0.001)
Check	5.76 a ¹	5.64 a	5.87 a	-0.10 a	0.11 a
Liquid Calcium	5.76 a	5.71 a	5.83 a	-0.02 a	0.08 a
Pelletize Lime	5.82 a	6.07 b	6.48 b	0.30 b	0.67 b
Ag Lime	5.76 a	6.16 b	6.51 b	0.43 b	0.77 b

¹ Different letters within a column indicate significant differences at the 0.01 probability level.

² Change after 3 months (soil pH at 3 month – initial soil pH)

³ Change after 12 months (soil pH at 12 months – initial soil pH)

Table 2. Soil pH After 1, 3, 6 and 12 Months of Laboratory Incubation. Initial pH was 5.2.

Treatment	-----Incubation Time in months and (Pr>F) -----			
	1 (<0.001)	3 (<0.001)	6 (<0.001)	12 (0.001)
Check	5.20 a ¹	5.05 b	4.99 a	5.10 a
Liquid Calcium	5.25 a	5.00 a	4.98 a	4.98 a
Pelletize Lime	5.93 b	6.30 d	6.45 b	6.26 b
Ag Lime	6.10 b	6.20 c	6.38 b	6.20 b

¹ Different letters within a column indicate significant differences at the 0.01 probability level.

Special Points of Interest

- **Private Pesticide Applicator Trainings**
- **Fruit & Vegetable Conference**
- **Tri-County Hay Auction**
- **Ag Producer Guide**

Dear Agriculture Producers,

I hope everyone is doing well and is enjoying the holiday season. In this newsletter you will find local extension programs that may interest you and be helpful in your farming operation.

With cold weather coming, this can be very stressful on our livestock. It is very important to keep your livestock hydrated with fresh water daily and to keep them fed with high quality hay. If you are interested in getting your hay sampled, give me a call. I would be happy to come to your farm and take samples of your hay or loan you out our hay probe so that we can ensure that your animals are receiving the correct amount of nutrition throughout the long cold winter months.

Have a wonderful Christmas and a Happy New Year!

“The farmer has to be an optimist or he wouldn't still be a farmer.” – Will Rogers.

Private Pesticide Trainings:

RSVP required. Call the Allen County Extension Office (270)237-3146 or email Adam Huber at adam.huber@uky.edu

- February 6th, 9:00 a.m.-11:00 a.m. CST
